University LaTeX Template

An attempt to match the core brand assets

Your Name

November 27, 2025

Introduction

This is the template for creating beamer presentations via LaTeX, using the style file (`beamerthemeNewcastleUniversity.sty`) that is based on the PowerPoint template in the University's asset library.

Outline

1. Basic elements
2. Features to add / fix

Newcastle University

Basic elements

From Newcastle. For the world.

Bullet points

- **Above cyan line**: short title of the presentation if exists, otherwise the presentation title.
- *Top Right*: logo.
- *Below cyan line*: frame heading.
- `Below red line`: slogan.

Colours

- We can make custom colours using the `\textcolor` command e.g. red.
- See next section on general colour scheme and background colours.

Equations

$$\pi = 3.14159265...$$

$$e^{j\pi} + 1 = 0 \tag{1}$$

Theorems & proofs

Theorem

$e^{i\pi} + 1 = 0$

The proof of Theorem 1 is as below:

Proof.

$$\begin{aligned} e^{i\pi} + 1 &= \cos\pi + i\sin\pi + 1 \\ &= -1 + i \times 0 + 1 = 0 \end{aligned}$$

□

Newcastle University

Pictures

- `\caption` might not work, hence the use of:
  1. the package `caption` in the preamble, &
  2. `\captionof` here

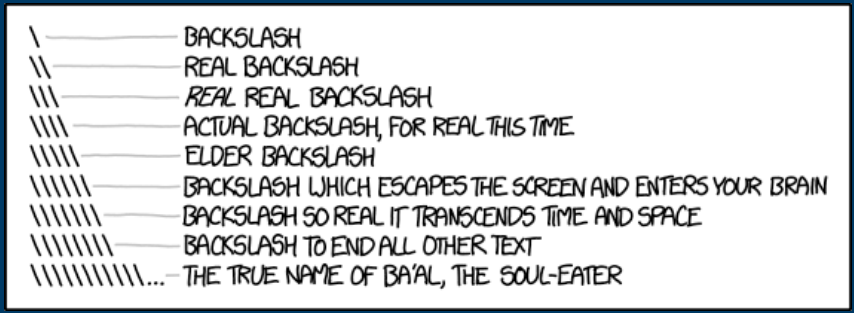

Figure: https://xkcd.com/1638/

Using references

- We can cite others via bibliography management.
- This means putting the references in a `.bib` file, and using a `\cite*` command when citing.
- Example: Devore et al. (2021)

Newcastle University

Features to add / fix

From Newcastle. For the world.

Newcastle University

Colours

- Currently this theme doesn't support blue on white, unlike the PowerPoint template
- This likely requires another style file, or adding an option in the current style file
- Also, it's unlikely to have slides of both colour schemes in a presentation

References

- Currently the references are not displayed properly in the last slide.
- The margins need to be readjusted for this.

Newcastle University

Section heading

- A long section heading will get split into multiple lines
- Subsequent lines doesn't get indented - to be fixed

Devore, J. L., Berk, K. N., and Carlton, M. A. (2021). *Modern Mathematical Statistics with Applications*. Springer texts in statistics. third edition edition.

Features: add / fix
